

In re Application of LUCOVSKY et al.
Serial No. 10/021,563

Listing of the Claims:

- 1-3 (Cancelled)
4. (currently amended) In a computer network, a method comprising,
receiving a request to retrieve inbox data, the request including
associated identity information;
reading from a data store to obtain inbox data based on the
associated identity information;
constructing an inbox document including at least part of the data, the
document arranged according to a defined schema for inbox data in a markup
language; and
returning the document in response to the request.
5. (original) The method of claim 4 wherein the schema comprises at
least one defined field for extending the schema.
6. (previously presented) The method of claim 5 wherein the at least
one defined field comprises data corresponding to an inbox display name.
7. (previously presented) The method of claim 5 wherein the at least
one defined field comprises data corresponding to a simple-mail-transfer-protocol
mail account.

In re Application of LUCOVSKY et al.
Serial No. 10/021,563

8. (currently amended) The method of claim 5 wherein the at least one defined field comprises data corresponding to a sender's email address.

9. (previously presented) The method of claim 5 wherein the at least one defined field comprises data corresponding to a recipient's email address.

10. (previously presented) The method of claim 5 wherein the at least one defined field comprises data corresponding to a subject of an email.

11. (previously presented) The method of claim 5 wherein the at least one defined field comprises data corresponding to an incoming server name.

12. (previously presented) The method of claim 5 wherein the at least one defined field comprises data corresponding to an outgoing server name.

13. (previously presented) The method of claim 5 wherein the at least one defined field comprises data corresponding to a password.

14. (previously presented) The method of claim 5 wherein the at least one defined field comprises data corresponding to a user name.

In re Application of LUCOVSKY et al.
Serial No. 10/021,563

15. (previously presented) The method of claim 5 wherein the at least one defined field comprises data corresponding to a size of an email.

16. (previously presented) The method of claim 5 wherein the at least one defined field comprises data corresponding to a date of an email.

17. (previously presented) The method of claim 5 wherein the at least one defined field comprises data corresponding to content of an email.

18. (previously presented) The method of claim 5 wherein the at least one defined field comprises data corresponding to an attachment to an email.

19. (currently amended) A computer-readable medium having computer-executable instructions for:

receiving a request to retrieve inbox data, the request including associated identity information;

reading from a data store to obtain inbox data based on the associated identity information;

constructing an inbox document including at least part of the data, the document arranged according to a defined schema for inbox data in a markup language; and

returning the inbox document in response to the request.

In re Application of LUCOVSKY et al.
Serial No. 10/021,563

20. (previously presented) The computer-readable medium of claim 19 wherein the schema comprises at least one defined field for extending the schema.

21. (currently amended) In a computer network, a method comprising:
accessing a network using a device, the accessing including
providing associated identity information corresponding to the device;
requesting data from a service accessible via the network, the
request based on the associated identity information;
determining if the request is an allowable request based on the
associated identity information; and
if the request is allowable, returning a document to the device having
at least part of the requested data, the document arranged according to a schema
in a markup language associated with the service.

22. (previously presented) The method of claim 21 wherein the
document comprises an inbox document.

23. (previously presented) The method of claim 21 wherein the data
comprises inbox data.

24. (previously presented) The method of claim 21 wherein the service
comprises an inbox service.

In re Application of LUCOVSKY et al.
Serial No. 10/021,563

25. (previously presented) The method of claim 21 wherein the schema comprises an inbox schema.

26. (previously presented) The method of claim 21, further comprising manipulating the data requested if the request is determined to be an allowable request.

27. (previously presented) The method of claim 26 wherein the manipulating comprises a query manipulation.

28. (previously presented) The method of claim 26 wherein the manipulating comprises an insert manipulation.

29. (previously presented) The method of claim 26 wherein the manipulating comprises a delete manipulation.

30. (previously presented) The method of claim 26 wherein the manipulating comprises an update manipulation.

31. (previously presented) The method of claim 26 wherein the manipulating comprises a replace manipulation.

In re Application of LUCOVSKY et al.
Serial No. 10/021,563

32. (previously presented) The method of claim 26 wherein the manipulating comprises a send message manipulation.

33. (previously presented) The method of claim 26 wherein the manipulating comprises a save message manipulation.

34. (previously presented) The method of claim 26 wherein the manipulating comprises a copy message manipulation.

35. (currently amended) A computer-readable medium having computer-executable instructions for:

requesting data from a service accessible via a network, the request based on associated identity information;

determining if the request is an allowable request based on the associated identity information; and

if the request is allowable, constructing a document in response to the request, the document having at least part of the requested data and arranged according to a schema in a markup language associated with the service.

36. (previously presented) The computer-readable medium of claim 35 having further computer-executable instructions for sending the constructed document to a source of the request.

In re Application of LUCOVSKY et al.
Serial No. 10/021,563

37. (previously presented) The computer-readable medium of claim 35 having further computer-executable instructions for determining if the request is an allowable request based on the associated identity information.

38. (previously presented) The computer-readable medium of claim 35 having further computer-executable instructions for manipulating data stored in a data store based on the request for data.

39. (previously presented) The computer-readable medium of claim 35 having further computer-executable instructions for denying the request for data based on the associated identity information.

40. (previously presented) The computer-readable medium of claim 35 having further computer-executable instructions for constructing the document in an extensible markup language.

41. (currently amended) In a computer network, a method comprising,
receiving a request to manipulate inbox data in a logical inbox document, the request including associated identity information;
determining a scope of access rights based on the identity information, the scope determined according to an inbox schema having inbox-related fields arranged into a content document in a markup language with defined structures for the fields; and

In re Application of LUCOVSKY et al.
Serial No. 10/021,563

if the request is within the scope, manipulating at least one set of data in the logical inbox document that includes data therein according to the associated identity information, each set of data in the logical inbox document structured to correspond to a field in the content document.

42. (previously presented) The method of claim 41 wherein manipulating at least one set of data comprises reading data from at least one field in the logical inbox document.

43. (previously presented) The method of claim 41 wherein manipulating at least one set of data comprises writing data to at least one field in the logical inbox document.
